This manual is provided free of charge for all students enrolled in PHYS153 at Idaho State University.

This manual and all of its contents may be used freely with permission of the author. All spreadsheets and other software required for these labs are available upon request from the author. Please direct all inquiries to [hackmart@physics.isu.edu](mailto:hackmart@physics.isu.edu).

### Table of Contents

Introduction	I
Celestial Coordinates I	1
Introduction to Light, Lenses, & Telescopes	10
Celestial Coordinates II	21
Observing Planets in the Night Sky	26
The Solar System	33
The Orbit of the Moon	41
Hertzprung-Russell Diagram	48
Properties of Light and the Atomic Spectra	54
Calculation of the Age of the Universe	60
Measuring the Properties of Binary Stars	67
